

# Climate Smart and Sustainable Järvenpää

Environmental Objectives of the City of Järvenpää

Järvenpää

# Resource-wise Järvenpää

We respond to the challenges of climate change, the depletion of natural resources and the loss of biodiversity with resource wisdom.

Järvenpää aims to be

- ✓ carbon-neutral by 2035
- ✓ a zero-waste city of sustainable consumption by 2050

# What is resource wisdom?

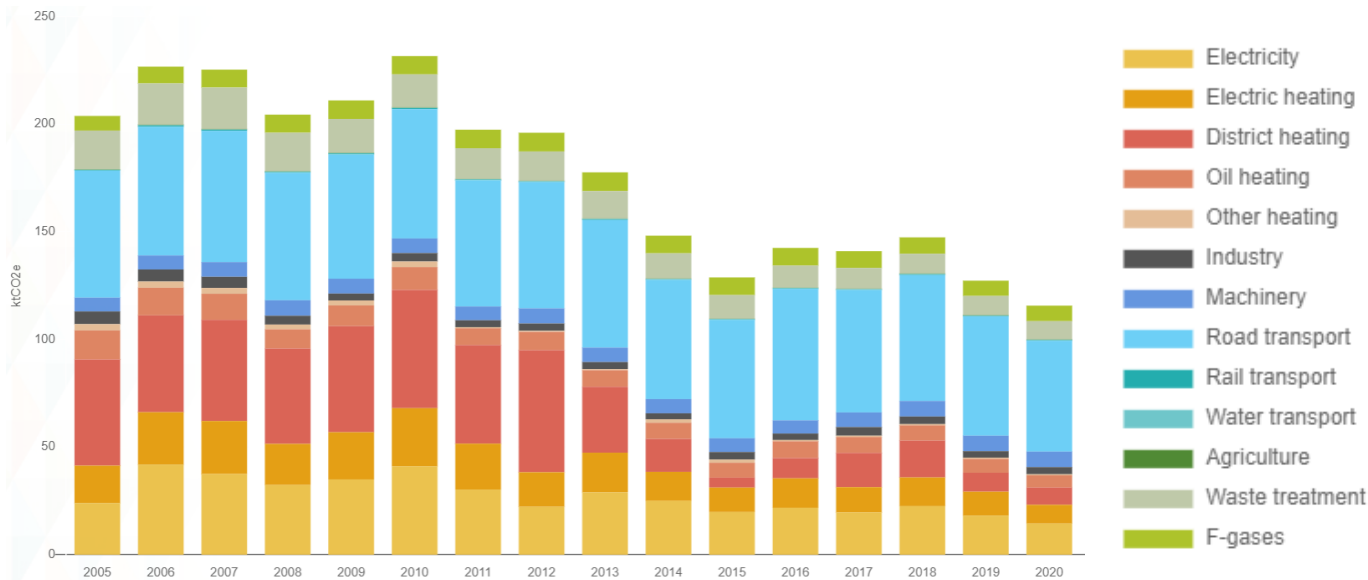

The idea is to reduce the adverse environmental impact while promoting the well-being of residents and strengthening the competitiveness of the area in a changing world.

A resource wise actor uses different resources (natural resources, raw materials, energy, products and services, spaces and time) in a sustainable manner that takes into consideration the consequences – ecological, social and economic.

# Where are we now?

- Järvenpää has already reached a decrease of 43 % in yearly ghg-emissions (from 2005 to 2021, Finnish Environmental Institute 2022)
- The smallest per capita carbon footprint among 14 pioneer cities (Consumption-based emissions calculation, Sitowise 2021)

## The City's task in promoting sustainability is above all, to set an example...

- ✓ city buildings have moved from oil heating to sustainable energy solutions
- ✓ we systematically improve energy efficiency in our buildings
- ✓ we work for sustainable public procurement
- ✓ we take sustainability into account throughout the organization

## ...and to create opportunities for resource-wise business and everyday life.

- ✓ a compact city with four train stations
- ✓ 15 e-car charging stations and a gas filling station
- ✓ the whole city is easily reached by bike, and we continuously improve the conditions even further
- ✓ we work with partners for sustainable solutions in housing, transportation and energy

# **Järvenpää invites companies to join on the journey to climate neutrality!**

The City of Järvenpää is committed to working together with companies and residents for a climate neutral and sustainable city, with good conditions for everyday life and business now - and in the future.

Contact us and learn more about opportunities for collaboration and support - or approach us with your own ideas for collaboration!
